

Driver of the energy transition

Our sustainable solutions

Babcock Wanson Group Working together to build a sustainable industrial model for a better world

Towards a sustainable industrial model

The fruit of an industrial adventure spanning more than a century, Babcock Wanson Group is a major international supplier of boiler rooms and associated equipment, operating in more than 13 countries. It has become a major player in the energy transition, offering increasingly carbon-free heat production solutions for industry.

By offering solutions that combine optimised yields and reduced waste thanks to technological innovations, and by exploring credible alternatives for tomorrow's heat production, Babcock Wanson Group's ambition is to enable users of its equipments to reduce their consumption of fossil fuels and achieve their targets for reducing their environmental footprint

A word from our Chairman

We are proud to play a leading European role in providing clean solutions for industrial steam and heat production.

This exciting challenge is an extraordinary source of motivation for all the teams in our Group, enabling us to make a vital contribution to improving our world.

Supporting the energy transition of industrial processes

Industrial processes are major consumers of steam and hot water. They generate 3 main types of environmental pollutants and impacts:

- CO₂ emissions due to the use of fossil fuels
- Emissions and discharges of pollutants (VOCs, NOx, SOx, etc.)
- Depletion of resources (water, energy, etc.)

for which reliable and effective technical solutions are urgently needed.

The challenges of decarbonisation

Decarbonisation aims to reduce greenhouse gas emissions.

To achieve their greenhouse gas emission reduction targets, manufacturers can choose to activate several levers to decarbonise their activities:

- Improving energy efficiency
- Using alternative raw materials with a lower carbon footprint
- CO₂ capture, storage and recovery
- Managing and reusing limited resources (water, etc...)

¹ Boiler 10T/h - 6 000 h - 60% charge - ² Vehicle comsumption : 130g/km - 15 000 km/year - ³ Electric co

A word from Ambienta Our majority shareholder

Supporting Babcock Wanson Group represents a unique opportunity to contribute to the decarbonisation of industry, a major challenge for all industrial players, which is fully in line with Ambienta's commitment to environmental sustainability.

ΛΜΒΙΕΝΤΛ Environmental Investments

Founded in 2007 +€3bn of European investment focused on sustainable development

A strong commitment

Since 2023, Babcock Wanson Group has supported the United Nations Global Compact, the largest international initiative on sustainable development and corporate social responsibility.

Target for reducing greenhouse gas emissions in Europe by 2030 (compared with 2015)

Babcock Wanson Group The partner you can trust to help you move towards energy transition

The energy transition solutions deployed by the Group's brands are built around 4 major pillars.

The 4 pillars of Babcock Wanson Group

Our positioning is unique.

With a presence across the entire value chain, Babcock Wanson Group is able to act and support its customers at every stage of their boiler plant's operation, as well as around and away from it.

Our equipment uses the best available technology. Their high level of efficiency enables them to reduce the consumption of fossil fuels and therefore reduce their greenhouse gas

The recovery and re-use of key products such as water (sludge treatment) or certain chemicals (solvents) contributes to the sound management of limited natural resources and to limiting pollutant emissions.

Decarbonisation

Electric boilers

To decarbonise steam and hot water users in the industry

The installation of electric boilers can massively reduce greenhouse gas emissions* from industrial sites.

Our range at a glance!

* 2 cases: Case 1: low carbon electricity available on the grid Case 2: regulating the electricity network when renewable electricity production exceeds demand

Our hybrid solutions

To reduce your carbon footprint & save money

Our hybrid solutions, whether supplied as standard or retro-fitted to existing equipment, enable you to anticipate the best available energy source.

Boilers

- Economical: use of surplus electricity
- Continuous regulation
- No additional emissions
- High energy efficiency

Add-on Boiler

• Allows you to switch from fossil fuel to electricity during operation

Renewable solutions

Alternative solutions are a promising route to decarbonising energy use. We are developing combustion solutions based on renewable energies such as hydrogen, biogas and oxycombustion.

Hydrogen

Our burners can be equipped with:

- 30% of hydrogen in standard
- 100% possible with a specific combustion head

Biogas

- Green alternative
- 100% renewable
- Emissions reduced to 1/8th

Oxycombustion

- Capture and recovery of CO₂
- Reduction of more than 90% of direct emissions of CO₂

Our high energy efficiency solutions

The combination of solutions increases the efficiency of our existing boilers and enables CO₂ savings linked to primary energy consumption.

Energy efficiency

Our overall technological knowledge of the boiler room ensures energy optimisation.

- Perfect matching of the burners with the heated vessel
- Water treatment adapted to the quality of the water available
- Remote monitoring of system installation

Environmental impact

- Reduced electrical consumption
- Low level of flue gas pollutants in combustion gases
- CO₂ savings

Our efficiency improvements

7 to 13% Energy savings (on NCV)

Reducing VOCs

Gaseous effluents from various industrial processes can contain high concentrations of VOCs (Volatile Organic Compounds) or odours. Thermal oxidation is the most effective and widely used solution for treating them.

Thermal oxidizers

Regenerative

• Ideal for processes with high gaseous emissions, low VOC content and low fuel consumption

Recuperative

- Ideal for effluents with high concentration of VOCs
- Optimum control of emissions

Deodorising

• To reduce odours generated by industrial processes

Reducing NOx

Our range of burners and associated equipment offers substantial energy savings and a significant reduction in NOx and CO_2 emissions.

Reduction of pollutant emissions

+400 Installations worldwide

Burners

- Optimum burner design for every boiler
- An ultra-low NOx range
- Adaptable to green fuels
- Compliance with the strictest international regulations

The "GOOD LOOP" concept

- Exclusive technology based on flue gas recirculation between burner and boiler (EGR)
- Designed for gas boilers

Recovery & reuse solutions

Water reuse

Our solution to water management issues is to provide solutions for recovering and reintegrating part of the water discharged, thereby reducing water consumption.

Reuse more, ...CONSUME LESS

- Reuse of concentrates
- Water and salt savings
- Reduction of waste

Treatment of waste water

>30%

>40%

consumption in cooling towers thanks to water treatment

Water savings by reusing process water

Babcock

decarbonisation.

www.vkkstandardkessel.de

Solvent recovery

Our solutions reduce the quantities of solvents released to atmosphere.

Prevent pollution

- Adsorption and regeneration
- A patented system which permits VOC recovery through regeneration of activated carbon, post adsorption
- 40% reduction in energy consumption (compared to other solutions on the market)

PBS POWER EQUIPMENT

www.pbspe.cz

Waste heat recovery

Steam compression heat pumps are a sustainable solution for recovering waste heat and using it.

High efficiency:

- COP (Coefficient Of Performance) greater than 100%
- Considerable primary fuel savings
- Non-polluting
- CO₂ free

Coefficient Of Performance

. . .

The strength of the Babcock Wanson Group lies in its brands.

Drawing on their history and complementary added values across different backgrounds and industries, our brands enable the group to offer unique expertise to its customers and markets across the entire value chain. Structured in this way, our group can accompany its customers on the road to
